bearings are shown to require less synthetic resin
than solid bearings and to permit longer use of the
resin.

A method is described by which a systematic check can be carried out on a non-repetition forge. By means of lost-time diagrams, determination of bottlenecks and detours in the organization, together with supervision of the economic result of the work, a genuine rise in productivity can be attained. DESCRIPTORS: *Couplings, *Flanges, *Pipe fittings,
Bolts, Stresses, Pressure, Mathematical analysis.

Formulas are determined for calculating the stresses on a pipe flange under an axially symmetrical strain. This stress is produced on the one hand in a radial direction by the internal pressure prevailing in the pipe and, on the other hand, by the longitudinal forces transmitted in the bolt area. The bolts take up the internal pressure in the pipe longitudinally and also the tightening force required in each case. The equations pre- (Engineering--Mechanical, TT, v. 9, no. 6) (over)
